PROJECTS

Storage App

- Developed a scalable and maintainable CRUD web application using JavaScript, Node.Js, Express, MongoDB, and Bootstrap to help companies manage their product inventory, track product information, and share it with team members.
- Implemented user registration and login functionality, allowing users to securely create, edit, and delete products and associated images.
- Designed and implemented a clean and intuitive user interface that simplifies the product management process, enhancing user experience and efficiency.
- Completed the project individually, demonstrating strong problem-solving skills, attention to detail, and the ability to manage time effectively.
